

Chapterization

Chapter 1: Introduction

It should have the basic concepts clarified including definition and also an idea about the background of research. It should also have the reason why the research has been conducted, its usefulness, relevance and some idea about such researches being conducted in other places.

Chapter 2: Review of Literature

This should include a review of literature which should be exhaustive and critical. It should be organized from the earliest to the latest. Also, if it is divided into sections then each section should have the references arranged from the earliest to the latest. The commentary should include aims and objectives, area of work, methodology, field study, major findings, recommendations and also a critical account should be given showing problems and lacunae in research at the end for each paper/book reviewed. Based on the problems shown, the researcher should write down the aims and objectives which should be framed at the end of this Chapter.

Chapter 3: Methodology

The Methodology of the research should be given in detail based on the aims and objectives. Each step of the research should be given the reason for choosing a particular method or technique clearly written. So, you should write what are the choices taken by you and why with definitions. Case studies should show the problems encountered in the field and how you overcame them.

Chapter 4: 'Land and People'

This should contain the basic ethnography of the community studied, the area, maps, census data, data from gazetteers and local history. Then there should be food, fairs and festivals, agriculture, climate, material culture, and all the institutions of society. The ethnography of the topic under study should be avoided.

Chapter 5: Main findings and Observations

This Chapter should include the data collected from the field on the topic.

Chapter 6: Discussion and Analysis

This Chapter should be divided into sections preferably based on the objectives of research work. Each section should be discussed in detail in the context of the researches from research papers and books as comparison. It should be illustrated with unusual findings and case studies. This constitutes the basic research that is unique to you and so should be done in a detailed yet careful manner.

Chapter 7: Summary, Conclusions and Recommendations

This should not be more than 3-5 pages. The findings and discussion should be summarized very briefly. Preferably, one paragraph per objective or two paragraphs may be written as concluding remarks. If required some recommendations may be given and if necessary you may also mention any unavoidable lacunae in your work.

Important notes:

- All chapters except the Conclusions should approximate the same size.
- Each Chapter should end with a paragraph that links up to the next Chapter in logical sequence.
- The beginning of each Chapter should link up with the previous Chapter and also state what the chapter is about.

Chapter	M.Sc.	Ph.D.
Chapter 1	8-10	Max. 50
Chapter 2	15-20	Max. 50
Chapter 3	10-12	Max. 50
Chapter 4	Up to 20	Max. 50
Chapter 5	15-20	Max. 50
Chapter 6	15-20	Max. 50
Chapter 7	3-5	Max. 5-8
